Лаба 1 Создаем среду textView и пишем в нее параметры

```
<TextView
   android:id="@+id/textView3"
   android:layout_width="317dp"
   android:layout_height="134dp"
   android:layout_gravity="center"
   android:background="@color/green"
   android:gravity="center"
   android:text="You are welcome"
   android:textColor="@color/blue"
   android:textSize="35sp"
   android:textStyle="bold|italic"
    app:layout_constraintBottom_toBottomOf="parent"
    app:layout_constraintEnd_toEndOf="parent"
    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toTopOf="parent"
    app:layout_constraintVertical_bias="0.83" />
```

Создаем среду editText и пишем в нее параметры

```
<EditText
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toBottomOf="@+id/textView3"
    android:layout_margin="40dp"
    android:hint="@string/str2"
    android:gravity="center"
    android:textColor="@color/green"/>
```

Пример оформления

Меняем цвет фона

```
<TextView
    android:id="@+id/textView3"
    android:layout_width="317dp"
    android:layout_height="134dp"
    android:layout_gravity="center"
    android:background=""
    android:gravity="center"
    android:text="@string/ffewfewfw"
    android:textColor="@color/blue"
    android:textSize="35sp"
    android:textStyle="bold|italic"
    app:layout_constraintBottom_toBottomOf="parent"
    app:layout_constraintEnd_toEndOf="parent"
    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toTopOf="parent"
    app:layout_constraintVertical_bias="0.83"
    android:fontFamily="monospace"/>
```

Создаем класс кнопки

```
<Button
    android:id="@+id/btn_1"
    android:layout_width="275dp"
    android:layout_height="53dp"
    android:layout_marginBottom="20dp"
    app:layout_constraintBottom_toTopOf="@+id/textView3"
    app:layout_constraintEnd_toEndOf="parent"
    app:layout_constraintStart_toStartOf="parent"
    android:text="START"/>
```

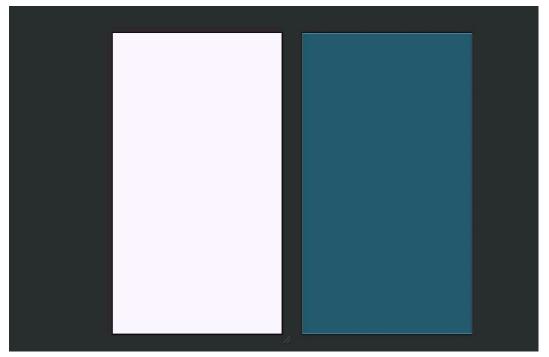

```
val btn: Button = findViewById(R.id.btn_1)
btn.setOnClickListener{
    val intent = Intent( packageContext this, MainActivity2::class.jαvα)
    startActivity(intent)
```

Создаем вторую страницу чтоб передать параметры в нашу кнопку

```
package com.example.first1uno

import ...

class MainActivity2 : AppCompatActivity() {
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        enableEdgeToEdge()
        setContentView(R.layout.activity.main2)
        ViewCompat.setUnApplyWindowInsetsListener(findViewById(R.id.main)) { v, insets ->
            val systemBars = insets.getInsets(WindowInsetsCompat.Type.systemBars())
            v.setPadding(systemBars.left, systemBars.top, systemBars.right, systemBars.bottom)
            insets
        }
    }
}
```

Вот так выглядит наша кнопка
